Submitted (APR-2001) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: May play a role in the regulation of the immune
system. Seems to play a role as an inhibitor of apoptosis.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed in thymus, liver, spleen and lymph
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            [2]

SUBCELLULAR LOCATION: Extracellular (Potential).
TISSUE SPECIFICITY: Expressed in many tissues, the highest levels among the tissues studied being in the skeletal muscle, testis and pancreas. Expressed in cartilage.
PTM: THE LYSINE-TYROSYLQUINONE IS GENERATED BY THE MODIFICATION OF A TYROSYL EXEIDUE CROSSLINKED TO THE EPSILON-AMINO GROUP OF A LYSINE (BY SIMILARITY).
SIMILARITY: CONTAINS 4 SRCR DOMAINS.
SIMILARITY: BELONGS TO THE LYSYL OXIDASE FAMILY.
                                                                                                                                                                                                             "A novel human lysyl oxidase-11ke gene (LOXL4) on chromosome 10q24 has an altered SRCR domain and is down-regulated by H-ras.";
Submitted (JUN-2001) to the EMBL/GenBank/DDBJ databases.

Structure and chromosomal location of the human CD6 gene: detection
of five human CD6 isoforms.";
J. Immunol. 158:1149-1156(1997).
I- FUNCTION: INVOLVED IN CELL ADHESION. BINDS TO CD166.
I- SUBCELLULAR LOCATION: Type I membrane protein.
CD6D AND CD6E; ARE PRODUCED BY ALTERNATIVE SPLICING.
I-SIMILARITY: CONTAINS 3 SRCR DOMAINS.
I-DATABASE: NAME-PROW; NOTE-CD guide CD6 entry;

Exp. Med. 189:1497-1506(1999).

-!- FUNCTION: Bind Gram-positive and Gram-negative bacteria.
-!- SUBCELDUAR LOCATION: Type II membrane protein (Probable).
-!- SIMILARITY: CONTAINS I SRCR DOMAIN.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
